

Thermodynamic steam trap

Type TDK

We have developed a new series of thermodynamic traps type TDK, with the thermodynamic capsule.

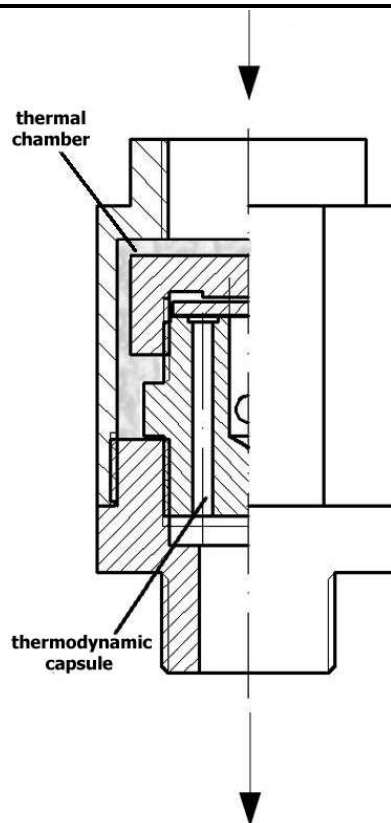

Housing and internal parts of this steam trap are made of stainless steel.

TDK series are produced with screw connection in sizes: R 1/2", R 3/4" and R 1"

Housing of the steam trap is the thermal chamber that provides a relatively uniform value of temperature inside the housing, regardless of external conditions. This results in optimum temperature for traps. Inside the housing is the replaceable thermodynamic capsule type TD.

Optionally, upon customer request in the housing of the steam trap strainer can be monted.

In the following table are given values of capacity for steam traps type TDK, related to the working pressure.
